

AMENDMENTS TO THE ABSTRACT

Replace the prior Abstract with the following New Abstract as follows:

ABSTRACT

A beverage cup or container that is convertible to a bullhorn device is disclosed. The cup is preferably made of a disposable material, such as paper or molded plastic. The cup has a hollow body portion, shaped to form a cylinder or cone, with an open first end, and a second end located distal from the first end. The second end has a removable base portion. The removable base portion may comprise a detachable base mated to the body portion to form a seal. The seal may comprise a separation apparatus that can be actuated to separate the base portion from the body portion. For example, the separation apparatus may be a pull string made out of string material, thin paper or plastic, that is disposed between the removable base portion and the body portion.

AMENDMENTS TO THE DRAWINGS

The attached sheets of drawings include changes to Figures 1-10. These sheets replace the original sheets, which include Figures 1-10.
